TECH STACK

LANGUAGES:

ML / DATA:

RAG · VECTOR EMBEDDING
PANDAS · SQL · FASTAPI

EDUCATION

- **PES UNIVERSITY**
B.Tech CSE(AI/ML)
- **ALLEN CAREER INSTITUTE**
11th - 12th Grade
- **SRI VANI EDUCATION CENTRE**
1st - 10th Grade

EXPERIENCE

QSG TECHNOLOGIES

Summer Intern

JUNE 2026 - JULY 2026

- Worked on two software projects involving full-stack web development and automation using Go (Golang), Angular, TypeScript, SQL, HTML, CSS, Git, AWS, Bickbucket, Oauth and REST APIs.
- Collaborated on developing, testing, and optimizing scalable applications while gaining hands-on experience with modern software development practices.

PESU INNOVATION LAB

Member

JUNE 2026 ONWARDS

- Selected as a member of the PESU Innovation Lab, where I collaborate with talented peers and work on research and software projects.

PROJECTS

Nautilus

Nautilus replaces linear, chat-style AI with a node-based knowledge interface built on neural networking. Every prompt becomes a concept card, and the system vectorises content through bi-encoders for fast retrieval and re-ranks links with a cross-encoder. The result is a graph that learns relationships between ideas across multiple databases instead of treating them as isolated messages.

Virdis

Satellite-powered land analytics platform. Draw regions on a map and get NDVI vegetation analysis, climate data, soil profiling, land use classification, suitability scoring, and AI crop recommendations, all in one dashboard.

ThanasOS

The BEST Web recreation of the macOS experience, built entirely in React. Every window, dock, menu, widget, animation, and keyboard shortcut is a fully interactive component with no iframes or screenshots.

Smart Chef

SmartChef combines a lightweight frontend with a FastAPI backend to deliver intelligent recipe suggestions. Enter the ingredients you have on hand, and the system ranks recipes by relevance using cosine similarity over TF-IDF vectors then generates step by step cooking instructions with Google Gemini AI.
